ICAAC

Background

ICAAC Culinary Arts Academy (www.icaac.net/) is a newly constructed facility. The facility is recognized as one of the best culinary schools in Cebu City.

Solutions

This facility requires mixed of VGA, D1, and 1.3MP cameras for different purposes. 1.3MP cameras are installed at critical location, where requires clear image. VGA and D1 cameras are installed most inside of the facility.

GKB provides D01, D01IR, GKB D6122, D02IR, and GKB D1702 IP cams for this project. GKB also provides NVR10 software to the client, which can record VGA, D1, and 1.3MP resolution video to the NVR10 Server. Additional, GKB provides Viewer11 software to the Dean, who can access the NVR10 Server to get live view and playback when it is needed.

At the remote site, GKB provides Cloud NVR platform for the Dean and authorized people to log in by user name and password. The Cloud NVR platform requires no DDNS, Port forwarding, or complicated network setup.

The most advantage of using GKB Diplomat is the remote access from IE and the multiple monitoring station inside the ICAAC facility. At the remote site, users use Cloud Platform and log in with user name and password in the universal website www.cloud-nvr.com. There is no port forwarding, DDNS, or software installation needed at remote client PC. In this case, authorized users can log in to the IP cam for live view and SD playback anywhere as long as they have internet access.

Benefits

The major benefits of using GKB Diplomat are ease of access, ease of management, flexibility in expansion, and affordable price structure.
