# Cebu City Hall

### Background

With existing and old analog system, Cebu City Hall was not able to obtain clear video footage for investigation. The existing old analog system contributed troublesome and difficult management platform as claimed by security guards in City Hall. There were too many DVRs and cabling needed to be located because Cebu City required multiple viewing stations. As a result, Cebu City Hall chose GKB Diplomat IP solution to secure the facility, provide flexible and expandable monitoring solutions, and easily manage all cameras.

### Solutions

GKB proposed GKB 43\* D3622 1.3MP IR dome network camera, 3 \* PTZ01 10X optical zoom in speed dome camera, and 1\* 16HDD Bay Standalone NVR. GKB D3622 was installed on top of office desks, to monitor daily operation of office clerk and save the video for future evidence if any arguments would have been raised between office clerk and citizens. All of the cameras were also equipped with 8G micro SD card for back up recording in case of network is failed and caused standalone NVR unable to record. GKB 16HDD Standalone NVR was installed with GKB NVR10 software, to record all 46 IP cameras for one month recording retention. Viewer11 was provided at different officer computers and they were authorized with different groups of cameras for camera access and playback of standalone NVR.

### Benefits

GKB provided free NVR10 software and free Viewer11 client software, which made total ownership cost economical. The provided Viewer11 client software can be installed on unlimited officer PC's which were authorized to access camera. There was no license fee for using Viewer11 client software. It was also very easy for security guard to manage the cameras and people who were authorized to access cameras for live view and playback. The software of NVR10 and Viewer11 were all graphical interface, which made entire system operation user friendly.
