Court of Cuiaba

Background

Court of Cuiaba is a state court of MatoGrosso State, Brazil. This is a state court of justice where are departments and agencies that work in judging civil, criminal, and family causes. The facility is looking for HD surveillance to secure the premises including building and parking lot.

Solutions

This court covers large area; therefore, GKB totally proposed 41 * GKB D02 (Indoor 1.3MP network camera with PoE) and 9 * GKB DZ260 (Outdoor 26X Optical high speed dome) to secure the premises. GKB also supplied free NVR10, a professional network video recording software for this project. The software is installed in several servers for recording different groups of network cameras. A central client software, Viewer11, is supplied to connect to different recording server for video playback and downloading.

The state of MatoGrosso has a plan to expand the same category of cameras over the state courts; as a result, GKB proposed also Eserver for central alarm monitoring in the long run. Eserver provides the fastest and most reliable alarm notification up to 500 network cameras per server installed state wide.

Benefits

Using GKB Diplomat solution is very economical. The free NVR10 recording software allows end users to achieve high definition surveillance solution with minimum investment in recording. The powerful NVR10 recording software allows the Court to expand the number of surveillance camera in the long run without additional license fee. Even in the long run when the court decides to install same category of cameras in statewide court, GKB Eserver helps the State HQ to do the fastest and most reliable alarm monitoring without requesting high bandwidth investment.
