# Allure Hotel & Suites

## Background

Allure Hotel and Suites is a newly constructed hotel in Cebu in 2011. GKB proposed a security and surveillance to Allure Hotel, which included GKB NVR10 recording software, Viewer11 client software, and IE cloud platform.

The completed platform helped the owner to be able to view cameras via mobile phone and IE remotely. It also helped the security department to be able to view different groups of cameras in different monitors in different in different control rooms.

## Solutions

In this project, GKB proposed its NVR10 for central recording stations. NVR10 is a free provided software installed on a Windows 7 based PC to record total 38 cameras installed in the facility. GKB also supplied its Viewer11 software, which is a client based software and it can connect to GKB network cameras directly for monitoring. GKB IP cameras, D01IR and D02 are used in this project. They are installed with a 8G micro SD card for recording events with separated video stream from network cameras, which do not affect the NVR recording quality and Viewer11 monitoring quality.

At the remote site, all of cameras are registered on GKB Cloud platform; therefore, remote users do not need to know IP camera DDNS or IP address to access. They can go to [www.cloud-nvr.com](http://www.cloud-nvr.com) to key in the user name and password to see all network cameras and SD card playback, as simple as one click.

## Benefits

Using GKB solution is very economical. The Viewer11, NVR10, and Cloud IE platform are free of charge and capable for future expansion. Easy remote access, easy operation client software Viewer11, and stable NVR10 recording software also affect the hotel owner choosing GKB IP solution for his newly constructed hotel. The micro SD card recording on IP cam can allow the security guards to playback event video from IE and Viewer11 remotely without accessing to NVR, and it can help security guards to locate the event video more efficiently.
