White House Hotel

Background

White House Hotel is a newly constructed hotel in Ho Chi Minh. The Hotel wanted to adapt high definition surveillance solution and also require easy remote site access from web browser and mobile phone.

Solutions

In this project, GKB proposed GKB D6122, an outdoor waterproof 1.3MP H.264 IR network camera, and GKB D3622TIR, a vandal proof 1.3MP H.264 IR network camera. The cameras are also with 8G micro SD card in case of network failure causing the centralized NVR not able to record.

The NVR is a PC base installed with GKB NVR10 software, which allows the computer to record up to 64 * 1.3MP IP cams @ 15fps and SXGA resolution. It also supports 16CH playback simultaneously. Intelligent search features such as missing object, foreign object, motion detection help the owner to locate event video efficiently.

At the remote site (Internet environment), all of cameras are registered on GKB Cloud platform; therefore, remote users do not need to know IP camera DDNS or IP address to access. They can go to www.cloud-nvr.com to key in the user name and password to see all network cameras and SD card playback, as simple as one click.

Benefits

Using GKB solution is very economical. The NVR10 and Cloud IE platform are free of charge and capable for future expansion. Easy remote access, easy operation client software Viewer11, and stable NVR10 recording software are the key factors that make the hotel owner choosing GKB IP solution for his newly constructed hotel. The micro SD card recording on IP cam can allow the security guards to playback event video from IE and Viewer11 remotely without accessing to NVR, and it can help security guards to locate the event video more efficiently with event playback feature only.
