# Catholic Church of The Ascension

## Background

Catholic Church of The Ascension is located in one of the prestigious churches in Nigeria. This Church is located in the Murtala Mohammed International Airport in Lagos Nigeria.

## Solutions

This church needs to install the electronic surveillance system in and around the premises of Catholic Church of the Ascension Murtala Mohamed international Airport Ikeja Plagos. GKB assisted its local SI partner, Depth Technologies and Echo Mondial Logistics GKB D6122 (1.3MP HD network camera) for outdoor environment and GKB PTZ01 (10X Optical PTZ) for indoor purpose. The HD image of D6122 allows security guards to be able to see the surroundings of the Church clearly even with digital zoom in.

GKB also proposed GKB NVR10 recording software which is capable of recording up to 64 \* 1.3MP IP cams and 16CH playback. The Cloud NVR ([www.cloud-nvr.com](http://www.cloud-nvr.com)) also contributes authorized personnel to be able to remotely viewing cameras via IE with only user name and password (without complicated DDNS or IP setting).

## Benefits

Using GKB Diplomat solution is very economical. The free NVR10 recording software allows end users to achieve high definition surveillance solution with minimum investment in recording. The powerful NVR10 recording software allows the Church to expand the number of surveillance camera in the long run without additional license fee. The Cloud NVR allows users to remotely access to IP Video via browser or Mobile phones by only key in user name and password, there is no complicated DDNS or IP setting. Only one click to access.
