Crater Automobiles Limited

Background

Crater is one of East Africa's foremost automotive players in the sector of Transport-Related distribution and engineering. Crater is headquartered in Nakuru and has a nationwide branch network over Kenya.

Solutions

Carter Group is looking for high definition surveillance solution for its Nairobi branch. This is the pilot run project. Eventually, Carter Group aims to do the surveillance to its all national wide branches under one single platform.

In this project, GKB proposed GKB D3622TIR (1.3MP IR vandal proof dome camera), GKB D6122 (1.3MP IR weatherproof outdoor bullet camera) and GKB D02TIR (1.3MP IR Indoor camera) for HD surveillance purpose. GKB also supplied NVR10 software, a network video recording software to local branch manager for recording its HD cameras. The software is capable of recording up to 64 * GKB 3622TIR cameras @ SXGA (1280 * 1024) resolution with 15fps resolution and quality. Besides NVR10, GKB also supplied Viewer11 software, a client-type software to Carter HQ. The software allows HQ to download and playback the branch NVR video data when it needed.

Unique Cloud NVR platform allows Carter Group to expand its surveillance to national wide branches under one single platform. The HQ administrator can create different user names and group different cameras into different groups on Cloud, which contributes the administrator managing all cameras everywhere and anytime.

Benefits

Using GKB Diplomat solution is very economical. The free NVR10 recording software allows end users to achieve high definition surveillance solution with minimum investment in recording and storage. The unique Cloud platform allows the HQ administrator to manage all national wide cameras with only user name and password without requesting difficult network setting.
