Lotteria Fast Food Chain Store

Background

Lotteria is a Korean based fast food chain company. During last decade, Lotteria has opened more than 100 outlets over Vietnam. Lotteria Vietnam needs a completed surveillance solution that allows the regional managers to remotely view, manage, and configure the network cameras through simple Cloud platform without installing any dedicated software on any Server. The goal is to live view, to playback, to manage, and to configure all network cameras installed in national wide branches through web browser.

Solutions

In this project, GKB proposed GKB D3622TIR (1.3MP H.264 IR Vandal Proof Dome camera) with 8G micro SD card installed and doing micro SD card recoding only in each outlet. D3622TIR provides crystal clear SXGA (1280 * 1024) video for remote viewing as well as local micro SD card recording. There is no centralized recording sever setup because of the network infrastructure investment is too costly. Through the Cloud platform (www.cloud-nvr.com), Lotteria's authorized personnel is able to log in with their user name and password to see authorized network camera live view and playback micro SD card video.

GKB provides Viewer11 software and it allows the personnel to download micro SD card video from each network camera periodically. The downloaded video can then be converted into AVI format and send to Korean HQ for event investigation and back up.

Benefits

Using GKB Diplomat IP surveillance is very user friendly and cost effective. Through Cloud Platform, Lotteria's authorized personnel could log with their own user names and passwords to access the authorized cameras for live view and playback anytime anywhere without installing any dedicated software on their notebooks. Through Cloud platform, you can manage hundreds of the camera on web. No NVR, no server software, no client software are needed. When accessing the network cameras, there is neither IP address nor DDSN. Only with user name and password to see and manage all network cameras. Truly user friendly platform.
